

CMR-6000 Media Router

Encapsulator & Receivers

Overview

The Media Router 6000 (CMR-6000) enables the reception of DVB-S and DVB-S2 transport streams and IP-based multimedia (video, audio and data) content to be delivered over satellite or high-speed ASI links and distributed to remote devices. Supporting MPE and MPEG-2 TS (Transport Stream), the Media Router 6000 facilitates standard data broadcasts, as well as the transport of MPEG-2 video service over IP.

Based on a 1RU platform, the Media Router 6000 has ASI and DVB-S/S2 inputs, and ASI and Ethernet outputs. The interfaces are configured using FAST codes, allowing users to initially purchase a basic set of features, and unlock other features and interfaces as requirements evolve. The CMR-6000 is unique, since it provides DVB-S/S2 input, ASI filtering and multiplexing, and MPEG-TS to IP, all in one package.
